Profile

I'm Ashe Andromeda Low, based in Singapore. I build AI tools and web systems with a focus on software engineering, security and practical usefulness.

Education

National University of Singapore

Bachelor of Computing, Computer Science · August 2023 to present · Singapore

Focus areas: Computer Security and Software Engineering.

Work experience

Cloudflare

Solutions Engineer Intern · May to August 2026 · Singapore

- Built an agentic AI platform to generate evidence-backed technical presentations for executive and procurement audiences, with human review retained in the process.
- Demonstrated the platform at a company all-hands meeting and received recognition from executive leadership.
- Built a modular agentic research framework that could run as a TypeScript module, MCP server, API or OpenCode plugin.
- Used the framework for proof-of-concept tools covering competitor sentiment analysis and prospective customers' technology stacks.

CENS, S. Rajaratnam School of International Studies, NTU

Software Engineer & Research Assistant · May to August 2025 · Singapore

- Developed the public-facing Influence Ops Analysis Toolkit using Next.js, TypeScript and Vercel. The application was demonstrated at academic conferences and to senior government stakeholders.
- Built Python tooling with Pandas and Folium to ingest submarine cable incident data and generate interactive maps for geospatial analysis.

Vue Networks / Vue Reality Labs

Intern · December 2020 to June 2021 · Singapore

- Tested an internal VR application for fencing technique training and reported bugs.
- Produced video assets for a corporate medical client, from scripting and editing through final delivery.

Leadership experience

NUS School of Computing AI Society

Publicity Lead · August 2025 to present

- Built the society's responsive website using Astro, React and Tailwind CSS, hosted on Cloudflare Workers.
- Set up GitHub Actions to build, deploy and synchronise updates from a dedicated content repository.
- Led a brand identity redesign covering typography, layouts, colour and voice across the website, social channels and promotional materials.

NUS Electronic Music Lab

President · March 2024 to May 2025

- Led a 117-member organisation. Membership grew by approximately 180% year on year, retention increased from 25% to 36%, and large-scale show collaborations expanded from two to six.
- Built a JavaScript Telegram bot to automate internal equipment loans.

Projects

Ariadne

A TypeScript dual-agent LLM facilitator for collaborative problem-solving in multiplayer VR. I designed the AI architecture and shared API contracts for a Unity client. The project placed third in its course at the 28th NUS School of Computing Term Project Showcase.

NUS AI Society website

A publishing site for events, blog posts and member profiles, with a separate content repository and automated deployment to Cloudflare Workers.

Homelab

A home network with two custom-built TrueNAS systems and a Raspberry Pi. It provides shared storage, redundant automated backups for family devices, media and game servers, and ad-blocking DNS.

Skills

Languages: TypeScript, Python, JavaScript and Java. Familiar with C/C++, Go and Rust.

Frameworks and data: React, Next.js, Astro, Tailwind CSS, SQL and MongoDB.

Cloud and operations: Cloudflare Workers, D1, R2, KV, Vectorize, Access and Zero Trust, and Dynamic Workers. Also GCP, Azure, Docker, GitHub Actions, Vercel and VPS administration.

AI: Agentic platforms, code agents, AI SDK and MCP.
